TASK 4.2

Formula used

Structure Formatting Properties Calculations

```
1 Avg amount WITH Promotion = CALCULATE(AVERAGE(Customer_Transactions[Amount]),Customer_Transactions[Promotion_Applied]
  = "Yes")
```

```
1 Avg amount WITHOUT Promotion = CALCULATE(AVERAGE(Customer_Transactions[Amount]),Customer_Transactions
  [Promotion_Applied]="No")
```

TASK 4.3

TASK 4.4

Formula used

1 Total Points Earned = SUM(Loyalty_Program[Points_Earned])

1 Total Points Redeemed = SUM(Loyalty_Program[Points_Redeemed])

TASK 4.5

1.Strategies for Redemption

Low redemption rates often mean that offers are irrelevant or too hard to find.

Gamification of Tiers: For your "Repeat Active" customers who are close to the "High-Value" threshold, show a Progress Bar on their receipt or app.

Time-Sensitive "Nudges": Use "Burn-down" notifications. Send a reminder 48 hours before a coupon expires. This creates Scarcity and triggers immediate redemption.

Personalized "Next-Best-Offer": If your data shows a customer always buys Electronics, a "10% off Groceries" coupon will have low redemption. Use Channel Insights to send coupons for the specific store type or category they already prefer.

2. Strategies for Retention (Reducing Churn)

Retention is about identifying "At-Risk" behavior before the customer actually leaves.

Early-Warning System: Use your Days Since Last Purchase metric. If a "High-Value" customer usually shops every 10 days but hasn't visited in 25 days, trigger an automated "Win-Back" email with a high-value offer before they officially fall into the "Churned" segment.

Omnichannel Integration: Analysis likely showed that "Omnichannel" customers (those shopping Online and In-Store) have higher CLV. Encourage this by offering "Click & Collect" discounts. Once an online shopper visits a physical store, they are statistically more likely to stay loyal.

VIP "Surprise & Delight": For your top-tier "High-Value Active" segment, move away from discounts and toward Experience. Offer early access to new products or a dedicated checkout lane. This builds emotional loyalty that competitors can't buy with a 10% discount.

Recommendations:

1. Which customers to prioritise for retention?

High-Value "South" Region Customers

Looking at Page 1, the CLV by Region chart shows the South region has the highest Customer Lifetime Value at 28.0K, significantly outperforming other regions.

These are most profitable customers. Even a small increase in churn in this region would result in the largest revenue loss compared to any other regions.

- "Plus" and "Premium" Loyalty Tiers

From the Repeat Rate % by Loyalty_Tier chart (Page 1), the Plus (87.34%) and Premium (85.71%) tiers show the highest engagement. However, Page 2 shows that Plus and Premium tiers have high spending but also contribute significantly to the total churn volume.

These customers have already demonstrated a willingness to stay (high repeat rate %) and spend. Losing a "Plus" member is more costly than losing a "Basic" member who spends less.

- "Sam's Club" and "Online" Store Shoppers

The Churn Rate % by Store_Type (Page 1) shows that Sam's Club (30.67%) and Online (30.33%) have the highest churn rates.

High churn in these categories suggests a friction point in the user experience or a lack of brand stickiness in these channels.

- The "Mid-Tier" Spend Segment

On Page 4, the Total Spend by Customer Segment shows the Mid-Tier is the largest spending group (approx. 0.3M).

While the Low-Tier has a higher count of customers, the Mid-Tier provides the bulk of the revenue.

2. Which channels are underperforming?

1. The High-Churn : Sam's Club & Online

On Page 1, the Churn Rate % by Store_Type chart highlights a clear performance gap.

Sam's Club: Has the highest churn rate at 30.67%.

Online with a churn rate of 30.33%.

Insight: Neighborhood Markets are outperforming them significantly in retention with a churn rate of only 23.67%.

2. Efficiency Lag: "High-Tier" Customer Acquisition

Count of Customer_ID by Customer Segment on Page 4, the High-Tier segment is almost invisible.

Insight: Even though individual High-Tier customers are valuable, the channel for "elevating" customers from Mid to High tier is underperforming.

3. Geographic Drag: "North" and "Central" Regions

From the CLV by Region chart (Page 1), the Central (12.8K) and North (13.4K) regions are the weakest performers in terms of lifetime value.

They generate less than half the value of the South region (28.0K).

Insight: Marketing spend in these regions is likely yielding a lower Return on Investment (ROI) because the customers acquired there don't spend as much over time.

4. Promotion Fatigue: "Electronics" in Promotions

On Page 2, the Avg Purchase Frequency by Product_Category shows that for Electronics, the purchase frequency actually decreases slightly when a promotion is applied (from 1.24 down to 1.21).

Insight: Unlike Apparel or Groceries, where promotions drive higher frequency, the "Promotion" channel for Electronics is underperforming—it's costing you margin without actually driving more frequent shopping.

3. How to strengthen loyalty program engagement?

We should focus on closing the "retention gap" between your high-spend tiers and high-churn channels.

On Page 1, Repeat Rate % shows that Elite members (78.67%) actually have a lower repeat rate than Plus members (87.34%).

Strategy: Implement a "Tier Protection" feature. If an Elite member's activity drops, send an automated "Stay Elite" offer to prevent them from slipping into a lower tier.

- Bridge the "Mid-Tier" to "High-Tier" Gap

Page 4 dashboard shows a massive volume of Mid-Tier spenders but almost no High-Tier customers (only 2).

Strategy: Gamification. Show Mid-Tier customers exactly how much more they need to spend to reach the next level. Since they already account for the bulk of your revenue (0.3M), a 5% conversion from Mid to High tier would significantly impact your bottom line. -

- Personalize by Region (The "South" Strategy)

The South region has the highest CLV (28.0K). A one-size-fits-all loyalty program is likely underperforming in your other regions.

Strategy: Roll out "Regional Perks." If the South prefers Electronics while the North prefers Groceries, customize the loyalty rewards to match those specific regional preferences rather than offering generic points.

- Optimize Promotion Frequency

On Page 2, data shows that promotions for Home & Living and Electronics don't significantly increase purchase frequency—in some cases, it even drops.

Strategy: Instead of offering price-based promotions that data shows are ineffective for these categories, offer loyalty engagement like "Extended Warranty" or "Expert Consultation" for High-Tier members.
